

Bellabee

The smarter way to **Relax, Sleep & Meditate**

Brain activity test

Bellabee off / on

1. Test for Anti Stress focus on Alpha activity
2. Test for Concentrate focus on Beta activity
3. Test for Meditate focus on theta and delta activity
4. Test for Improve sleep focus on theta and delta activity

off

on

1. Test for Anti Stress focus on Alpha activity, which has picked up, but also look at other areas how brain has changed and brain responds to Alpha's changed state.

1. Test for Anti Stress focus on Alpha activity

2. Test for Concentrate focus on Beta activity

3. Test for Meditate focus on theta and delta activity

4. Test for Improve sleep focus on theta and delta activity

Pre Test: focus on Alpha activity, but also much activity on other areas in theta and delta shown. Alpha is very very low and not being picked up by recording device.

Percentage Deviant Voxels Delta (1-3Hz)

Percentage Deviant Voxels Delta (1-3Hz)

Percentage Deviant Voxels Theta (1-3Hz)

Percentage Deviant Voxels Theta (1-3Hz)

All pictures are summary pictures from the software used to do recordings.

Pictures are top, front and side views where activity is detected.

On highlighted areas one can see how each area is affected.

2. Test for Concentrate focus on Beta activity, which has increased significantly, because concentrate works from 16Hz upwards in Bella Bee. Hi beta also picked up.

1. Test for Anti Stress focus on Alpha activity

2. Test for Concentrate focus on Beta activity

3. Test for Meditate focus on theta and delta activity

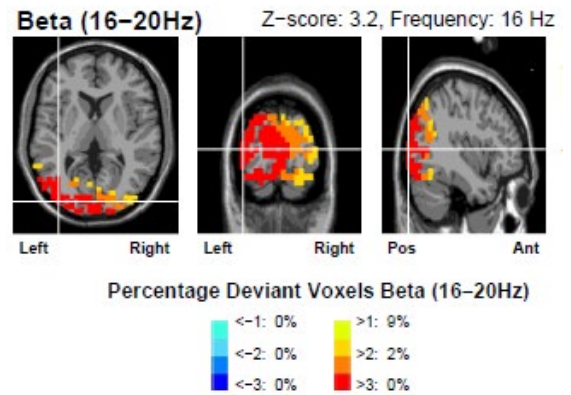

4. Test for Improve sleep focus on theta and delta activity

All pictures are summary pictures from the software used to do recordings.

Pictures are top, front and side views where activity is detected.

On highlighted areas one can see how each area is affected.

Pre Test: focus on Beta activity, high beta is the only one which is very active before Bella Bee used.

3. Test for Meditate focus on theta and delta activity, which has decreased, Bella Bee starts on 8Hz, so it works on the lower frequencies during this pre-set program.

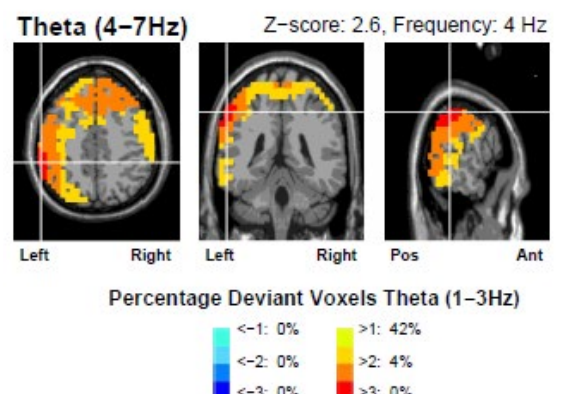

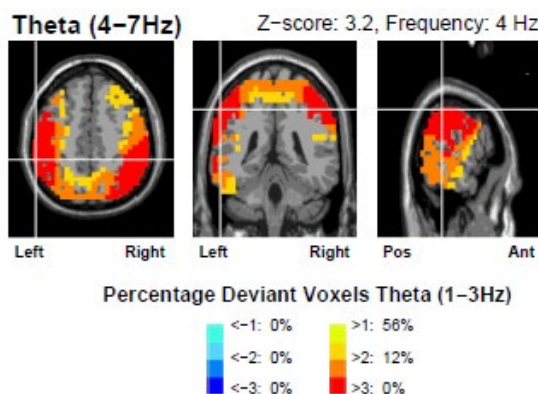

1. Test for Anti Stress focus on Alpha activity

2. Test for Concentrate focus on Beta activity

3. Test for Meditate focus on theta and delta activity

4. Test for Improve sleep focus on theta and delta activity

Pre Test: focus on theta activity, quite active as well as Delta too.

All pictures are summary pictures from the software used to do recordings.

Pictures are top, front and side views where activity is detected.

On highlighted areas one can see how each area is affected.

4. Test for Meditate focus on theta and delta activity, which has decreased, Bella Bee starts on 8Hz, so it works on the lower frequencies during this pre-set program.

1. Test for Anti Stress focus on Alpha activity
2. Test for Concentrate focus on Beta activity
3. Test for Meditate focus on theta and delta activity

Pre Test: focus on delta activity, quite active. This could be because of ADHD on me. More delta is usually seen during sleep states as then Delta is more active. It can also be because eyes are closed during the test and I was awake, which can also create more delta activity.

4. Test for Improve sleep focus on theta and delta activity

Percentage Deviant Voxels Delta (1-3Hz)
